REMOTE AUDIT SOLUTIONS

BUSINESS ASSURANCE INNOVATION SOLUTIONS

Remote auditing offers greater flexibility and a more sustainable alternative to traditional assessments, reducing time, travel, and expenses while also improving the quality and detail of audit reports.

Intertek has developed Inview, a remote audit solution to help organisations conduct more efficient and safer audits. By wearing a video and audio source located in a light-weight harness, you are able to interact remotely with a qualified auditor, allowing them to evaluate the facility, conduct interviews, and review the necessary documentation in real-time – just as they would if they were in person at your organisation.

Incorporating Technology

This technology-driven approach drives innovation in a rapidly changing, global business environment. Allowing for better insight into worldwide operations and supply chains while providing less disruption to workers and a more sustainable evolution to the auditing process.

Conducting More Efficient Audits

As businesses expand their operations and supply chains across international borders, it is increasingly important to have a cohesive approach to quality, safety, and sustainability goals throughout the entire organisation. Conducting more efficient audits and third-party verification of facilities and vendor operations will evaluate process efficiencies, reduce costs

and intrinsic risks to the business, while improving working conditions, and ensuring ethical business practices are being upheld. Performing audits via a remote auditor will reduce the added costs and time needed for travel to the facility location, allowing organisations to maximize their investment in their auditing program and gain greater transparency by giving access to a wider audience to observe the audit in real time. Inview is governed by our risk-based processes and guidance, ensuring the highest levels of safety, integrity and consistency as well as backed by Intertek's Total Quality Assurance promise.

Mitigate Your Risk in Hazardous Locations

Remote auditing can also help mitigate risk in hazardous locations. The auditing of high-risk environments has traditionally been an industry-wide concern due to the Occupational Health and Safety issues of allowing access to an auditor who is untrained to operate in a dangerous environment. Intertek's remote auditing solution would permit an auditor to remotely evaluate the facility through the eyes of a trained employee.

Compatible with Business Assurance Solutions

The remote auditing solution can be applied across Intertek's Business Assurance solutions such as Management Systems Certification and Second Party, 360 Brand Experience, and Supply Chain Assurance programmes, as well as a supplement to Intertek Academy training courses.
